Name	:	Miss. Thanuja S	Report Date	:	01/04/2026 03:20 PM
Age/Gender	:	20 Years/Female	Collection Date	:	01/04/2026 03:16 PM
Referred By	:	A. Vijaya Kumar Garu	Barcode	:	003276
Registration Date	:	01/04/2026 03:16 PM			

HAEMATOLOGY

COMPLETE BLOOD COUNT (CBC)

TEST DESCRIPTION	RESULT	FLAG	UNIT	REF. RANGE
Haemoglobin	13.6		g/dL	13 - 17
Total Leucocyte Count	8700		/cumm	4000 - 10000
Differential Leucocyte Count				
Neutrophils	65		%	40 - 80
Lymphocytes	26		%	20 - 40
Eosinophils	05		%	1 - 6
Monocytes	04		%	2 - 10
Basophils	0.00		%	0 - 1
Absolute Leucocyte Count				
Absolute Neutrophils	5655.00		/cumm	2000 - 7000
Absolute Lymphocytes	2262.00		/cumm	1000 - 3000
Absolute Eosinophils	435.00		/cumm	20 - 500
Absolute Monocytes	348.00		/cumm	200 - 1000
RBC Indices				
RBC Count	**4.45**	**L**	**Million/cumm**	**4.5 - 5.5**
MCV	81.57		fL	81 - 101
MCH	30.56		pg	27 - 32
MCHC	**37.47**	**H**	**g/dL**	**31.5 - 34.5**
HCT	**36.3**	**L**	**%**	**40 - 50**
Platelets Indices				
Platelet Count	3.03		laksh/cumm	1.5 - 4.5

Name	:	Miss. Thanuja S	Report Date	:	01/04/2026 03:20 PM
Age/Gender	:	20 Years/Female	Collection Date	:	01/04/2026 03:16 PM
Referred By	:	A. Vijaya Kumar Garu	Barcode	:	003276
Registration Date	:	01/04/2026 03:16 PM			

TEST DESCRIPTION	RESULT	FLAG	UNIT	REF. RANGE
MALARIAL ANTIGEN				
Plasmodium Vivax Antigen	Negative			
Plasmodium Falciparum Antigen	Negative			

Interpretation:

Malaria Antigen Test Result	Interpretation
Plasmodium Vivax Antigen Positive	The test detected the presence of Plasmodium Vivax antigen in the blood. This may indicate an active infection with P. Vivax.
Plasmodium Falciparum Antigen Positive	The test detected the presence of Plasmodium Falciparum antigen in the blood. This may indicate an active infection with P. Falciparum.

Referred By	:	A. Vijaya Kumar Garu	Barcode	:	003276
Registration Date	:	01/04/2026 03:16 PM			

TEST DESCRIPTION	RESULT	FLAG	UNIT	REF. RANGE
BIOCHEMISTRY				
C- REACTIVE PROTEIN (CRP) QUANTITATIVE				
C- Reactive Protein (CRP)	**6.12**	**H**	**mg/L**	**0 - 6**

Interpretation:

Reactive Protein (CRP) is an acute -phase protein found in concentrations of upto 5 ug/ml in the serum of healthy persons. However, during an inflammatory response or infection, the levels may increase by as much as one thousand fold. This increase in CRP levels in serum appears to be a nonspecific phenomenon but the change can be used to monitor the Erythrocyte sedimentation rate (ESR). The changes in concentration of CRP occur more rapidly than in the (ESR), Elevated levels of CRP can usually be demonstrated in cases of acute myocardial infarction, rheumatic arthritis, bacterial and viral infection, acute rheumatic fever with of without carditis and in several types of malignancies particularly those with metastasis.

TEST DESCRIPTION	RESULT	FLAG	UNIT	REF. RANGE

SEROLOGY & IMMUNOLOGY

WIDAL TEST

WIDAL TEST	**Positive**
S. Typhi Antigen O	**1:160**
S. Typhi Antigen H	**1:160**
S. ParaTyphi Antigen AH	1:20
S. ParaTyphi Antigen BH	1:20

Interpretation:

Antibody	Interpretation	Positive Result	Negative Result
S. typhi O	Recent infection with S. typhi	≥ 1:160 titer	< 1:160 titer
S. typhi H	Current or past infection with S. typhi	≥ 1:160 titer	< 1:160 titer
S. paratyphi AH	Current or past infection with S. paratyphi A	≥ 1:80 titer	< 1:80 titer
S. paratyphi BH	Current or past infection with S. paratyphi B	≥ 1:80 titer	< 1:80 titer

Registration Date	:	01/04/2026 03:16 PM			

TEST DESCRIPTION	RESULT	FLAG	UNIT	REF. RANGE
DENGUE PROFILE - CARD TEST				
Dengue NS1 antigen	Negative			
Dengue IgG	Negative			
Dengue IgM	Negative			

Interpretation:

The Dengue Profile (IgG, IgM, and Ns1Ag) is a diagnostic test used to detect Dengue virus infections. IgG indicates past exposure, IgM suggests recent infection, and Ns1Ag identifies early viral presence. Elevated IgG signals immunity, while elevated IgM and Ns1Ag indicate active infection. This comprehensive profile aids in timely diagnosis, guiding healthcare professionals in managing and monitoring Dengue cases effectively
